## GERMANY BLOCKS CONSTANTINOPLE'S FALL

### Starvation, Not Gunnery, that Caused Fort's Surrender

#### FAULTED VEIN IN CALIFORNIA CLAIM PIGKED UP BY WEST END COMPANY

Recent developments in Ohio territory of the West End Consolidated Mining company have resulted in solving one of the large faults of this western territory. This occurred in the California claim of the Ohio group, now owned by the West End company. The west extension of the north vein was encountered finally beyond the north and south fault, which caused a horizontal displacement of 220 feet.

Development work on the new segment of the vein has resulted during the past week in the opening up of six feet of very good ore. It is disclosed above the 300-foot level. The company has drifted to date on this ore about thirty feet. It looks very well. It should make a good ore body from present indications. This ore is the furthest west of any ore so far discovered in the territory of the West End Consolidated Mining company.

The Halifax, which is also under the management of Mr. Chandler, is shipping at the rate of three fifty-ton lots weekly to the West End mill. The ore is coming from and above the tenth level and on and above the 1160 intermediate. Development is progressing on the 10, 12, 14 and 17 levels. The working force has been increased to that employed before the cessation of production in order to timber and make other repairs and now most of the development is looking toward the opening up of the virgin east territory. On the 10th and 12th levels the headings are now in trachyte. No developments have taken place out of the ordinary in either the Rescue or the North Star.

The West End proper is plugging along. The amount of development work and ore extraction have scarcely varied from the week previous. The indications in the exploration channels, the blocking out and the stoping are all unchanged, with no deterioration, although bettered promise. The mill is dropping thirty stamps steadily. Ten are working on custom ore, occupied chiefly with shipments from the Halifax and Merger, also North Star and Montana. A general scheme of development of hitherto unprospected ground is being carried forward.

#### FAULTED SEGMENT OF FAVORITE LOCATED

The Tonopah Belmont Development company has had one particular development during the week that is worthy of note. It is the picking up of a faulted block of the Favorite vein. The find was made in what is known as the north crosscut No. 6. There is ten feet of good ore. General Manager Bradshaw has started to drift on this segment. The discovery was made on the 1100 foot level.

#### FIVE HEADINGS IN BUTLER SHOW ORE

DEVELOPMENT WORK BEING  
PRESSED BY GENERAL SUPERINTENDENT PIKE

The Jim Butler Mining company is not materially increasing its output, owing to the silver price, but has now five headings in ore and is extracting from each. They are 709 raises in Desert Queen, 736 and 738 raises, No. 1 east drift off No. 6 stope and 704 raise from east drift off winze, all in Wandering Boy.

Work is being pushed on the 800 south crosscut, 804 south crosscut, 806 raise to connect with 700 winze, driving west 904 drift Desert Queen and 806 crosscut in Wandering Boy.

Schmitt led the fight against the bill. Threats that political oblivion awaited those who won their election to the assembly by partisan votes were made by speakers for the opposition who assailed their colleagues for what they termed "party betrayal." Thirty, representing almost an equal division of sentiment, pleaded and argued through the night, but the final roll call showed that not a single vote was changed by the oratory.
